General requirements for *Luer activated valves (LAVs)* incorporated into medical devices for intravascular applications

Approved 01 October 2021 by
AAMI

Approved 26 October 2021 by
American National Standards Institute, Inc.

Abstract: This standard covers *Luer activated valves (LAVs)* for intravascular applications, which open and permit access to the fluid conduit when a male Luer connector is inserted

Keywords: *Luer activated valves (LAVs)*, connectors, misconnection

AAMI Standard

This Association for the Advancement of Medical Instrumentation (AAMI) standard implies a consensus of those substantially concerned with its scope and provisions. The existence of an AAMI standard does not in any respect preclude anyone, whether they have approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard. AAMI standards are subject to periodic review, and users are cautioned to obtain the latest editions.

CAUTION NOTICE: This AAMI standard may be revised or withdrawn at any time. AAMI procedures require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of publication. Interested parties may obtain current information on all AAMI standards by calling or writing AAMI.

All AAMI standards, recommended practices, technical information reports, and other types of technical documents developed by AAMI are voluntary, and their application is solely within the discretion and professional judgment of the user of the document. Occasionally, voluntary technical documents are adopted by government regulatory agencies or procurement authorities, in which case the adopting agency is responsible for enforcement of its rules and regulations.
