National foreword

This document (ISO 28000:2007) has been prepared by Technical Committee ISO/TC 8 „Ships and marine technology“ (Secretariat: SAC, China and DIN, Germany) and has been adopted, unchanged, as DIN ISO 28000:2015-08.

The responsible German body involved in its preparation was the *DIN-Normenstelle Schiffs- und Meerestechnik* (DIN Standards Committee Shipbuilding and Marine Technology), Working Committee NA 132 BR-01 SO *Internationale Normung (Sp ISO/TC 8)*.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. DIN [and/or DKE] shall not be held responsible for identifying any or all such patent rights.

Users of the German version of this standard should note the following:

Compliance with this standard does not confer to an organization immunity from its legal obligations, even if such compliance has been verified by internal or external audit.

In the German translation of this standard, “security” has been translated as *Sicherheit* (which can also mean “safety”).

Specification for security management systems for the supply chain

Introduction

This International Standard has been developed in response to demand from industry for a security management standard. Its ultimate objective is to improve the security of supply chains. It is a high-level management standard that enables an organization to establish an overall supply chain security management system. It requires the organization to assess the security environment in which it operates and to determine if adequate security measures are in place and if other regulatory requirements already exist with which the organization complies. If security needs are identified by this process, the organization should implement mechanisms and processes to meet these needs. Since supply chains are dynamic in nature, some organizations managing multiple supply chains may look to their service providers to meet related governmental or ISO supply chain security standards as a condition of being included in that supply chain in order to simplify security management as illustrated in Figure 1.
